

JLG Forklift Part

JLG Forklift Parts - After retiring in the late 1960's, John L. Grove started on a cross country RV expedition. After spending many years establishing his family built crane company with his brother, John had no idea that this trip would bring forth the rise of JLG Industries, Inc. The world leader of mobile aerial work platforms and precision material handling equipment was the end result of a road expedition.

All through their journey, John reacquainted himself with former business connections along the way. In combination with these conversations and a significant event; two workers had been tragically electrocuted on scaffolding when the Groves were passing through the Hoover Dam. John uncovered a vast marketplace for a product that could swiftly and safely elevate people in the air to accomplish maintenance and other construction services.

Following their return from vacation, John set up a joint venture with two of his friends and obtained a metal fabrication business in McConnellsburg, Pennsylvania. Opening with a small crew of twenty staff, they produced and sold their first JLG aerial work platform in 1970. The business incorporates many of the basic design elements of that original lift into current models.

Since then, JLG Forklifts have come a great distance from when Mr. John L. Grove returned from his fatefull cross-country trip and since the first JLG aerial platform entered the market. As of today, the company has expanded itself into quite a few global marketplaces and continues to develop innovative equipment to ensure that clients are able to become safer and more well-organized within their workplace.
