

Fork Positioner for Forklifts

Fork Positioner for Forklifts - A fork positioner is actually a tool constructed out of high quality materials intended to be able to endure the most difficult procedures and work environments. This piece of equipment could enable the one driving to be able to operate the blades hydraulically without leaving the seat. Side shifting models have the added ability to laterally position the arms or the entire load in order to facilitate much more accurate carrying and position in a quicker and much more effective manner.

The unique blade pocket design could enable the individual operating it to be able to safely swing the unit's forks without any worry of destroying the positioning cylinders. This could allow the worker the alternative to either perform independent or simultaneous blade movement, depending on the job requirement. For most lift trucks with non-OEM carriages, complete carriages are needed. Standard OEM carriages could be transformed into blade positioners on available units.
